

Vishal Goel

Software Developer & Technical Consultant

✉ vishalgoel003@gmail.com ☎ +91-9816923672 🔗 [linkedin.com/in/vishalgoel003](https://www.linkedin.com/in/vishalgoel003)

With a decade of experience designing, scaling, and optimizing distributed systems in the Banking and Financial Services Domain, specializing in Core Java, Microservices Based Architecture, and resolving complex system performance bottlenecks. Combining an IIT research background in Data Analytics with deep expertise in Cloud Deployment and system resiliency to drive direct business value. Proven track record of championing Agile Methodologies, Security Best Practices (DevSecOps), and cross-functional leadership to deliver enterprise-grade platforms.

Skills

Languages & Web: Core Java (Concurrency), Python (PySpark), SQL, PHP, HTML/JS/CSS

Architecture & Design: Microservices, Event-Driven Architecture, Serverless Architecture, System Design Patterns, API Design

Cloud, DevOps & Security: AWS, CI/CD pipelines, Git, Jenkins, Docker, Ansible (IaC), Cloud Deployment, DevSecOps, IAM (Familiar with: Kubernetes / K8s)

Databases & Big Data: Hadoop, Spark, Kafka, MySQL, MongoDB, Redis, Elasticsearch (ELK Stack)

Domain Expertise: FinTech, Banking & Financial Services, Financial Markets (FX, Trading), Authentication (RBAC, TOTP, OAuth)

Professional Experience

ION Group

07/2018 – 03/2026 | Noida, Delhi-NCR

Software Engineer

Functional Role: Senior Software Engineer (Jul 2023 - Mar 2026)

- Architected and led a cross-functional team in the end-to-end ATDD integration for an acquired OSGI Financial Markets platform, standardizing testing protocols within strict Agile Methodologies.
- Addressed RFQ pricing failures by optimizing core VWAP calculations and leveraged data-driven log analysis to propose tolerance tests in production, preventing configuration-driven client losses.
- Resolved complex Production & Operations Management blockers (Java GC bottlenecks, event-bus queue misses) by engineering custom log-processing scripts and simulation tooling.
- Authored GenAI playbooks and mentored junior engineers on LLM analysis steps, accelerating L1 triage and preventing unnecessary developer escalations.

Functional Role: Senior Automation Engineer (Jan 2021 - Jun 2023)

- Built an AWS Spot provisioning framework for CI/CD pipelines and dev environments, utilizing real-time AZ pricing to minimize snatch-backs and unlock 2.5X more compute budget.
- Led project migrations from SVN to Git and integrated Software Component Analysis (SCA) to identify vulnerabilities in third-party dependencies, enforcing strict Security Best Practices.
- Extended a Maven-based Automated Release Tool for one-click, sprint-end Cloud Deployments across 50+ components, saving 24+ hours of manual effort.
- Directed a diverse team during a company-wide hackathon, designing a fintech-style corporate parking architecture.

Functional Role: Software Development Engineer (Jul 2018 - Dec 2020)

- Co-developed the critical adapter component connecting the Foreign Exchange (FX) Solution with the Delivery & Confirmation platform to ensure seamless transaction delivery.
- Contributed to the legacy modernization of the Wallstreet Suite trading solution, porting middle and back-office functionalities to modern Java ION components.
- Supported the full product lifecycle through L3 Maintenance team rotations, performing Root Cause Analysis (RCA), debugging, and releasing production patches.

Novopay Solutions (now Trustt)

07/2016 – 07/2018

Software Engineer

Bengaluru, Karnataka

- India Stack Integrations: Integrated REST/SOAP APIs with banking partners to enable UPI, CMS, and AEPS supporting a FinTech platform handling over 1 Billion in monthly gross transaction volume.
- Microservices & Core Banking: Engineered the API Gateway and Identity & Access Management (IAM) features, including an RBAC service, for a cloud-based Core Banking System.
- Migrated legacy monoliths to Java/Spring microservices and implemented Google Authenticator's TOTP mechanism for secure intra-service Authentication & Authorization.

- Developed REST endpoints using Jersey and maintained internal dashboards by extending an AngularJS Frontend Framework application.
- Database Management: Migrated the core platform from an OrientDB NoSQL model to a relational MySQL database. Solved critical performance bottlenecks, reducing API response times by over 50%.

Independent Technical Consulting
03/2026 – Present | Noida, Delhi-NCR

Technical Consultant

- Edge Cloud: Architecting and deploying cost-optimized sandbox environments utilizing OCI free-tier compute, Cloudflare services, and Tailscale VPN meshes for secure, distributed connectivity.
- Applied AI & Automation: Prototyping orchestrator-worker Agentic AI workflows utilizing local LLMs and n8n to automate complex data tasks without relying on paid provider APIs.
- Full-Stack Prototyping: Developing localized technology solutions, including static site generation pipelines, and cross-platform utilities, to digitize operations for small businesses.
- Technical Mentorship: Delivered a remote DevSecOps and live CI/CD pipeline masterclass to 150+ undergraduate engineering students, bridging the gap between academia and production realities.

Certifications & Awards

AWS Certified Cloud Practitioner <i>Amazon Web Services (AWS)</i>	2024
UGC-NET Qualified (JRF & Assistant Professor) <i>University Grants Commission (UGC)</i>	2016
GATE CS AIR 657 (99.71 Percentile) <i>Ministry of Human Resource Development (Govt. of India)</i>	2013

Education

Indian Institute of Technology Mandi <i>M.S. (by Research), Computer Science</i>	2013 – 2016 Himachal Pradesh
• Thesis: Optimized stream-based and MapReduce distributed algorithms for Formal Concept Analysis.	
Uttarakhand Technical University <i>Bachelor of Technology, IT</i>	2009 – 2013 Uttarakhand
• Capstone: Built a full-stack, low-cost Android fleet-tracking system.	

Publications

Concept Discovery from Un-Constrained Distributed Context <i>Springer – Lecture Notes in Computer Science (BDA 2015)</i>	12/2015
Co-authored peer-reviewed research proposing a scalable algorithm for formal concept mining.
