

Vishal Goel

Senior Software Engineer & Technical Consultant

✉ vishalgoel003@gmail.com ☎ +91-981692XXXX 🌐 linkedin.com/in/vishalgoel003

SUMMARY

With a decade of experience designing, scaling, and optimizing distributed systems in the FinTech sector, specializing in Core Java, microservices architecture, and resolving complex performance bottlenecks. Combining an IIT research background with an entrepreneurial mindset to ensure system resiliency and clean architecture directly drive business value. Currently focused on independent architectural research and developing zero-commission serverless platforms.

PROFESSIONAL EXPERIENCE

Makex India | Makex.in

Independent Technical Consultant & Advising Founder

03/2026 – Present

Noida, Delhi-NCR

- Deployed a zero-commission ordering platform, empowering local vendors and securing their data from big aggregators.
- Driving ideation and architectural validation for cross-domain startups in health, mobility, and retail tech.
- Designed and delivered an online DevSecOps masterclass to 150+ university students, bridging the academic-enterprise gap through live internet-routed CI/CD pipeline demonstration and open-sourced resources.

ION Group

Software Engineer

07/2018 – 03/2026

Noida, Delhi-NCR

Functional Role: Senior Software Engineer (Jul 2023 - Mar 2026)

- Architected and led the end-to-end ATDD integration for an acquired OSGi trading platform , standardizing testing protocols for global handover.
- Addressed RFQ pricing failures by optimizing core VWAP calculations, and leveraged data-driven ticket analysis to propose CI-style production validations, preventing configuration-driven client losses.
- Resolved complex P1 blockers (Java GC bottlenecks, network drops) by engineering custom log-processing scripts and simulation tooling.
- Authored GenAI playbooks and standardized prompt templates for Client Services, detailing LLM analysis steps to accelerate L1 triage and prevent unnecessary development escalations.
- Mentored junior engineers and led technical design reviews, driving adoption of best practices in system design.

Functional Role: Senior Automation Engineer (Jan 2021 - Jun 2023)

- Built an AWS Spot provisioning framework for CI/dev environments, stitching real-time AZ pricing and interruption data to minimize snatches, unlocking 2.5X more compute at the same budget.
- Led a team of associate engineers to build a parallel deployment solution for complex FX environments, driven entirely by centralized static data.
- Extended a Maven-based Automated Release Tool for one-click sprint-end deployments across 50+ components, saving 24+ hours of manual effort.

Functional Role: Software Development Engineer (Jul 2018 - Dec 2020)

- Led the trade migration epic and co-developed the critical adapter component connecting the FX Solution with the D&C platform.
- Contributed to the large-scale legacy modernization of the Wallstreet Suite trading solution to modern Java-based ION components.

Novopay Solutions (now Trustt)

Software Engineer

07/2016 – 07/2018

Bengaluru,

Karnataka

- **India Stack Integrations:** Integrated REST/SOAP APIs with banking partners to enable UPI, Cash Management Services, and AEPS, supporting a FinTech platform that handled over ₹1 Billion in monthly gross transaction volume.
- **Microservices & Core Banking:** Built the API Gateway and RBAC services for a cloud-based Core Banking System. Migrated legacy monoliths to Java/Spring microservices and implemented Google Authenticator's TOTP mechanism for secure intra-service communication.

- **Aadhaar Bridge** [↗](#) (**Khosla Labs incubatee**): Contributed to a managed BYOL SaaS transition for a sister company's platform (serving Ola, PhonePe). Migrated from OrientDB to a split MySQL database, reducing response times by over 50%, and co-designed an E-Sign API.

EDUCATION

M.S. (by Research), Computer Science

IIT Mandi

2013 – 2016
Himachal Pradesh

Thesis: Optimized stream-based and MapReduce distributed algorithms.

B.Tech, Information Technology

College of Engineering Roorkee

2009 – 2013
Uttarakhand

Capstone: Built a full-stack fleet-tracking system from repurposed phones.

SKILLS

Languages, Frameworks & Architecture

Core Java (Concurrency), Spring Boot, Microservices, Event-Driven, JUnit, Mockito

Big Data & Databases

Hadoop, Spark, Kafka, MySQL, MongoDB, Redis, Elasticsearch (ELK Stack)

DevOps, Cloud & Tools

CI/CD, Git, Jenkins, Docker, Ansible (IaC), AWS, Generative AI & Prompt Engineering

CERTIFICATIONS & AWARDS

AWS Certified Cloud Practitioner

Amazon Web Services (AWS)

2024

UGC-NET Qualified (JRF & Assistant Professor)

University Grants Commission (UGC)

2016

DAAD IIT Master's Sandwich Scholarship

German Academic Exchange Service (DAAD)

2014

GATE CS AIR 657 (99.71 Percentile)

Ministry of Human Resource Development (Govt. of India)

2013

PUBLICATIONS

Concept Discovery from Un-Constrained Distributed Context [↗](#)

Springer – Lecture Notes in Computer Science (BDA 2015)

12/2015

Co-authored peer-reviewed research proposing a scalable, distributed algorithm for formal concept mining that enables arbitrary data distribution across nodes without requiring a priori attribute knowledge.
